add alcohol q.s. to make the whole measure ℥v.

Each ℥ fluid drachm or teaspoonful contains 100 drops, consisting of 12 minims each of the first three ingredients and 4½ minims or 49 drops of chloroform.

Dose For persons over 18 years of age teaspoonful
" " 14 to 18 " " " small "
" " 10 " 14 " " " ½ "
" " 6 " 10 " " " 30 drops
" " 2 " 6 " " " 10 to 30 "
" Infants One to ten drops according to age.

In time of Epidemic Cholera or Diarrhea when any person has two movements of the bowels more than natural within the 24 hours the 2nd one should be followed by a dose of the mixture, the dose to be repeated ~~within the 24 hours~~ after every movement that follows. If the movements increase in frequency or copiousness after the second dose of the medicine has been taken a Physician should be sent for at once and a double dose be taken after each movement until he arrives. Immediately after taking the first dose the person should go to bed and remain there for 12 hours after the diarrhea has entirely ceased.

Compound Syr Hypophosphites
(Proctors.)

℞.

Hypophosphite	Lime	256 grs.
"	Soda	192 "
"	Potassa	128 "
"	Iron (recently Precipitated)	96 "
Hypophosphorous Acid Solution		q.s or 240 "
White Sugar		9 oz
Ext Vanilla		½ "
Water	q.s.	

Dissolve the salts of Lime Soda & Potassa in 6 ℥ of water, put the Iron salt in a mortar & gradually add solution of hypophosphorous acid till it is dissolved. To this add the solution of the other salts, after it has been rendered slightly acidulous with the same acid & then water, till the whole measures 12 f.℥. Dissolve in this the Sugar, with heat & flavor with the Vanilla.

N.B. The 96 grs. of protosulphate Iron in the above formula are obtained when 2 grs. Hypophosphite of Soda dissolved in 2 ℥ water is decomposed with a slight excess of Solution of protosulphate Iron & the white precipitate well washed on a filter with water.

Elixer of Calisaya, Iron & Bismuth

℞

STRYCHNIA IN SNAKEBITE.

Its Successful Application in Two Cases in Australia.

Dr. Wolfang Hunt, of the Toowoomba Hospital, Queensland, Australia, gives an interesting account of a case which had come under his care. The patient was a child aged sixteen months. An elder sister while playing with her a little way from home heard her scream and saw a snake clinging to her hand. Running to the house, she quickly fetched her mother and an uncle, who found the child crying and holding the third finger of the left hand, on which was a small punctured wound. The snake was killed as it was making off, and found to be a "death adder."

The child was taken to the house, says the Recorder, and the end of the finger removed, the stump being sucked and drenched with ammonia and ligatures applied to the arm. She was then taken to Toowoomba for the nearest medical aid, ammonia being applied to the hand meanwhile. An attempt was made to give stimulants by the mouth, but vomiting immediately followed their administration.

On admission to the hospital, three hours after the accident, the child was almost comatose, the body and the extremities cold, pupils dilated and insensitive to light, the pulse rapid and irregular. The child was at once wrapped in hot flannels, and heat applied to the limbs, while four minims of liquor strychnia were administered hypodermically, and a strong faradaic current applied to the nape of the neck and along the spine. Fifteen minutes later another four minims of liquor strychnia were injected, and almost at once a change began to manifest itself in all the symptoms, and in a short time the child recognized and played with its parents.

With the exception of a few muscular twitchings, recovery was uninterrupted, and the child was discharged the next day in apparently perfect health and none the worse, except for the loss of her finger. The case is very important, especially with reference to the means used for procuring recovery, viz.: the hypodermic injection of strychnia. Dr. Hunt is to be congratulated on his success in this case, as well as in that of another patient whom he mentions as having been admitted in a similar condition after being bitten by a brown snake, and in whom also recovery followed the hypodermic injection of strychnia.

A RECIPE

That Worked Well During the Cholera Epidemic of 1832.

The following recipe for cholera was used with remarkably good results during the scourge in Europe in 1832:

1 oz. Laudanum.
1 oz. Spirits of Camphor.
1 oz. Peppermint.
1 oz. Hoffman's Anodyne.
1 drachm Tincture of Capsicum.
Add one pint of the best French brandy.
Dose, one tablespoonful; repeat every 30 minutes if not relieved.
